HH monthly income per capita (Rs.)	1247.38	773.70	0.62	1193.02	1228.34	1283.60	0.165
HH has TV	0.79	0.41		0.80	0.81	0.78	0.487
HH has bicycle	0.41	0.49		0.40	0.38	0.43	0.419
HH has scooter/motor	0.19	0.40		0.22	0.21	0.17	0.110
HH has computer	0.02	0.12		0.01	0.01	0.02	0.657
HH has mobile phone	0.84	0.37		0.82	0.83	0.84	0.419
HH has nonfarm enterprise	0.26	0.44		0.25	0.29	0.24	0.334
HH has water connection	0.78	0.42		0.82	0.73	0.78	0.156
<i>Panel B. Respondent Variables</i>							
Woman	0.58	0.49		0.56	0.60	0.59	
Age	38.47	9.10	0.24	38.58	39.14	38.08	0.467
Married	0.98	0.14		1.00	0.97	0.98	0.055*
Hindu	0.82	0.39		0.79	0.84	0.82	0.340
Completed elementary school	0.45	0.50		0.48	0.43	0.45	0.953
Completed secondary school	0.03	0.17		0.04	0.03	0.03	0.773
Microfinance client	0.48	0.50		0.48	0.49	0.48	
Has inconsistent time preferences	0.49	0.50		0.46	0.50	0.50	0.642
Is risk averse	0.17	0.38		0.15	0.20	0.17	0.719
Has any income during last 12 months	0.75	0.43		0.78	0.74	0.73	0.505
<i>Panel C. Health Variables</i>							
Knows AIDS is not curable	0.39	0.49		0.40	0.39	0.38	0.945
Knows nightblindness is curable	0.28	0.45		0.25	0.33	0.28	0.173
Knows should wash hands after defecation	0.92	0.27		0.93	0.92	0.92	0.717
Drinks filtered or boiled water	0.01	0.09		0.01	0.01	0.01	0.827
Uses a water vessel with tap	0.03	0.16		0.04	0.02	0.03	0.752

Notes: Data from baseline survey. In Column 3, the Coefficient of Variation (CV) is the ratio of the standard deviation to the mean and is calculated for continuous variables. The last column reports the p -value of the joint hypothesis test $H_0 : \beta_1 = 0, \beta_2 = 0$, where the regression is the same specification used for the impact analysis (Equation ??) and the dependent variable is a baseline outcome. The p -values are not reported for two baseline outcomes—i.e., the dummy for woman and the dummy for whether the respondent is a microfinance client—because they are contained in the strata fixed effects in the regression. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 2: Study Participants by Wave and Survey Attrition (Missing Data)

	No. of Study Participants	% Allocation Random Assignment			% of Study Participants with Missing Data		
		HEE	HEEC	Control	Baseline	Midline	Endline
Wave 1	191	21%	27%	52%	0%	53%	3%
Wave 2	282	26%	25%	50%	0%	5%	7%
Wave 3	160	25%	26%	49%	0%	4%	4%
Wave 4	254	26%	24%	50%	0%	4%	7%
Total	887	25%	25%	50%	0%	15%	5%

Notes: The study was conducted in four waves. Each wave refers to a separate iteration of participant recruitment, baseline, randomization, film screenings, midline, and endline. For each wave, the table indicates the number of study participants, their allocation to the study arms, and the percentage of study participants with missing data for each survey.

Table 3: Effects on Short-Term Health Knowledge

	All Topics	By Topic		
	(1)	(2)	(3)	(4)
		Cleanliness and Hygiene	Midwives, Maternal & Child Health	Condom, AIDS, Syphilis
HEE	0.083*** (0.015)	0.083*** (0.022)	0.092*** (0.021)	0.065* (0.034)
HEEC	0.093*** (0.015)	0.075*** (0.024)	0.116*** (0.022)	0.067* (0.035)
<i>F</i> -test, HEE = HEEC				
<i>F</i> -statistic	0.402	0.107	0.995	0.003
<i>p</i> -value	0.526	0.744	0.319	0.959
Control Mean	0.530	0.392	0.603	0.521
Control SD	0.157	0.267	0.243	0.351
N	755	755	755	755

Notes: Outcomes are from a health knowledge test three weeks after the final film screening. The dependent variables are the proportion of correct answers in all test questions (Column 1) or in a given subset of questions by topic (Columns 2 to 4). Regression results for individual test questions are presented in Supplementary Material Table ???. *HEE* is a dummy for assignment to only health entertainment-education. *HEEC* is a dummy for assignment to health entertainment-education with cash incentives for test performance. Robust standard errors. All regressions include dummies for randomization strata, where strata are defined by gender, neighborhood, and microfinance client status. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 4: Effects on Longer-Term Health Knowledge

Supplementary Material Table F5: Multiple Inference Adjustment

	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
<i>Panel A. Effects on Short-Term Health Knowledge</i>									
HEE, p -value	0.000	0.000	0.000	0.060					
HEE, q -value	0.001	0.001	0.001	0.104					
HEEC, p -value	0.000	0.002	0.000	0.054					
HEEC, q -value	0.001	0.005	0.001	0.098					
<i>Panel B. Effects on Longer-Term Health Knowledge</i>									
HEE, p -value	0.000	0.020	0.000	0.002	0.000				
HEE, q -value	0.001	0.040	0.001	0.005	0.001				
HEEC, p -value	0.000	0.920	0.008	0.012	0.000				
HEEC, q -value	0.001	0.946	0.018	0.026	0.001				
<i>Panel C. Effects on Health Behavior</i>									
HEE, p -value	0.008	0.324	0.413	0.108	0.554	0.487	0.963	0.276	0.000
HEE, q -value	0.018	0.433	0.514	0.177	0.644	0.585	0.963	0.414	0.001
HEEC, p -value	0.041	0.312	0.390	0.697	0.692	0.224	0.313	0.591	0.000
HEEC, q -value	0.078	0.433	0.501	0.738	0.738	0.351	0.433	0.666	0.001

Notes: The table presents the adjusted and non-adjusted p -values of the coefficients for HEE and HEEC. The adjusted p -values are the **benjamini1995controlling** q -values as described in **anderson2008multiple**. Panels A, B, and C correspond to Tables ??, ??, and ??, respectively. For example, in Panel A, Column 1, the value 0.000 is the p -value of the estimate of the coefficient on HEE in Table ??, Column 1, and its corresponding q -value is 0.001.

Supplementary Material Table F6: Minimum Detectable Effect Size

	(1)	(2)	(3)	(4)	(5)
<i>Panel A. Effects on Short-Term Health Knowledge</i>					
Control Group, SD	0.157	0.267	0.243	0.351	
Marginal Effect of Cash Incentives, SE	0.016	0.024	0.024	0.039	
Marginal Effect of Cash Incentives, MDE	0.045	0.068	0.066	0.108	
Marginal Effect of Cash Incentives, MDE ÷ Control Group SD	0.290	0.254	0.272	0.308	
<i>Panel B. Effects on Longer-Term Health Knowledge</i>					
Control Group, SD	0.148	0.210	0.292	0.178	0.361
Marginal Effect of Cash Incentives, SE	0.015	0.018	0.028	0.018	0.037
Marginal Effect of Cash Incentives, MDE	0.043	0.050	0.077	0.050	0.103
Marginal Effect of Cash Incentives, MDE ÷ Control Group SD	0.293	0.239	0.265	0.282	0.287

Notes: The table presents the ex-post Minimum Detectable Effect (MDE) sizes for the marginal effect of cash incentives, assuming 80 percent power and the 5 percent significance level. The marginal effect of cash incentives is the effect of HEEC minus the effect of HEE (i.e., $\beta_2 - \beta_1$ in Equation ??). The MDEs are obtained as 2.8 times the standard error (SE) of the estimate, and then expressed as a proportion of the control group standard deviation (SD). Panels A and B correspond to Tables ?? and ??, respectively. For example, in Panel A, Column 1, the value 0.012 is the SE of $\beta_2 - \beta_1$ in Table ??, Column 1.

Supplementary Material Table F7: Effects on Health Behaviors
Probit and Logit Estimation

	Cleanliness and Hygiene		Midwives, Maternal & Child Health		Condoms, AIDS, Syphilis		Night-blindness	
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
	Drinks filtered or boiled water	Uses a water vessel with tap	Washes hands with soap at least thrice daily	Would go for ante-natal care if self/spouse pregnant	Would go for hospital delivery if self/spouse pregnant	Has been tested for HIV in the last 3 months	Uses condom during inter-course	Eats more nutritious foods to prevent night-blindness
Panel A: Probit								
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

Notes: The outcome variables represent various methods of constructing an overall health knowledge index. Columns 1 and 5 is based on the proportion of correct answers to all questions (i.e., reproducing the original results from Column 1 of Tables ?? and ??). In Columns 2 and 6, each sub-component of the test is weighted equally. Columns 3 and 7 implement Inverse Covariance Weighting (ICW). Columns 4 and 8 use the standardized first component of principal component analysis. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
